

ENTERPRISE MANAGEMENT SYSTEM (EMS™)

INTRODUCTION

Enterprise Management System (EMS™) is an Advanced Integrated Solution for Managing All Enterprise Devices, Desktops and Applications. **EMS™** is a set of processes and technologies that facilitates an organization to manage all types of hardware devices including desktops, wireless networks, and other computing services in a business context. The role **EMS™** provides has become increasingly important to manage these computing devices and applications securely and strictly adhering to the company security policies.

BENEFITS

EMS™ enables today's large enterprises and organization to become truly Secured and Agile. By Utilizing the power of Modern Computing Devices and Operating Systems, including Android, iOS, macOS and Windows 10. Secure Corporate Data, Drive Employee Productivity and enable business innovation in ways you never thought possible. **EMS™** provides the secure foundation required to meet both End-User Demands and IT Security Policies Requirements.

EMS™ consist of four(4) Main Modules that can be customized for easy integration with other Enterprise System. They are:-

- **Real Time Dashboard Transaction Monitoring**
- **Computing Hardware Devices, including Desktops, Management**
- **Enterprise Wide Application Management**
- **Enterprise Wide User Management**
